

FrontDesk

January 2010

Complete Hotel Management from InnAble Hospitality

InnAble FrontDesk is a complete property management system with a focus on providing excellent guest service.

Available January 2010

More Than a Property Management System

InnAble FrontDesk is more than just a modern property management system. It's a Guest Service System. Everything you need to serve your customers is immediately available. No complicated procedures. No confusing key combinations. Just a modern application that gets the job done.

Everything You Need, Right Where You Need It

The focus of FrontDesk is quick and flexible customer service. The Outlook-like user interface is very easy to learn. New staff will be comfortable in minutes. The most common actions are always available with a single click. Less common tasks may require a few clicks but they are available everywhere you might need them.

Modern Efficient Design

FrontDesk is not just another upgrade of an old system. It's a fresh design based on years of real-world experience in working hotels. Pop-up menus, context-sensitive help, Outlook-style navigation, and smart links are everywhere. Search is built-in and always available.

Solid and Secure Foundation

FrontDesk is built on Microsoft's .Net Framework and stores your data using SQL Server 2008. These are enterprise-grade technologies because your data is worth it.

From Reservations to Receivables

FrontDesk is a complete solution for running your hotel. Everything from reservations, check-ins, invoicing, receivables, and bank deposits is built-in.
